Monetize your experience - Introduction

The data are the new gold. Digital technology today is the biggest source of information. Governments accumulate enormous amounts of information about citizens and businesses, within and beyond their borders. An individual can be represented in tens or hundreds of government databases. As people interact with their devices, as mobile phones or bank accounts; the amount of data available to institutions continues to grow. The world is enriching thanks to us; through the information we provide.

Log in to your personal account or post an image on Facebook, means to send information. We share information every time we send a message, we open an article in an online journal even every time we click "I like it."

Technology is a means of bilateral knowledge; we receive information by giving our own. But this is not a secret. We are aware of the existence of a market formed by the purchase and sale of personal data, even if it is difficult to understand its greatness.

Today, the priority of each controlling entity, are Big Data. The term Big data indicates technologies that has of collecting and analyzing huge amounts of data. By extrapolating and breaking down a huge amount of data, it is possible to discover the links between different phenomena, creating predictions about trends and future reactions.

In 2017, 35 billion dollars were registered in the Big Data market. In 2011 there were 7.6 billion and 103 billion are expected in 2027. An exponential growth made possible thanks to the adoption of technological tools: in 2011, 472 million smartphones were sold, in 2017 over 1 and a half billion. In the last two years there has been an increase of 90% of the data produced in the world, because more and more people have access to the web: more sources of information mean an ever richer data market.

Generating data today is simple and inevitable. The sale of data produced will generate a market of 300 billion dollars in 2018. We all share our data every day through social networking platforms like Facebook, multimedia sharing like YouTube and Instagram, blogging platforms like Wordpress, Twitter and Tumblr, review sites like Yelp and TripAdvisor, question sites and Answers like Yahoo Answers and forums, e-commerce portals and website data. These data are unique and important as human creation, generated on the basis of our interests, publications, the desire for interaction. Once the reports and the dependencies between the collected data are detected, it is possible to make predictions of future behavior and results. Predicting the future on the basis of objective analysis allows the creation of financial, political and social strategies. Act by controlling the flow of data and manipulating the attention of the masses: this means deciding what will happen tomorrow.

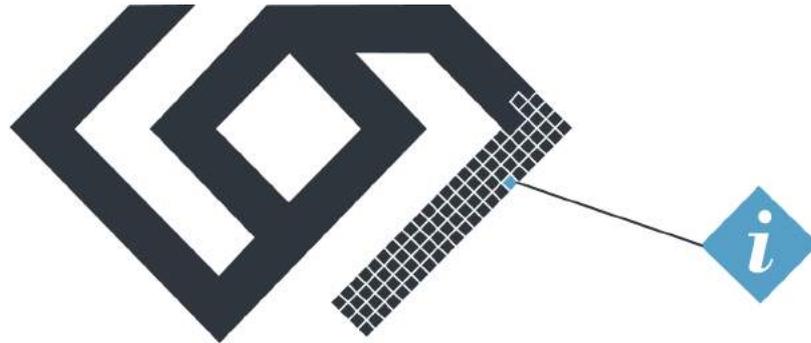

The most interested sector in the analytics market is the banking sector. Banks want to know everything about current and potential customers, because any information can be useful to frame us. Economic availability is only one aspect: the goal is to know where we live, when and where we shop, how much we spend, what is our profession, our relationships, our habits. Anticipating needs and reducing credit risks is a huge advantage for banks. Data analysis allows the bank to know the value of each customer even before meeting it. The name of each of us is followed by an evaluation, assigning us a social credit, both to protect ourselves from possible risks, and to propose a service that is as personalized as possible to our needs.

Thanks to big data, the financial risk of a person is assessed on the basis of his personality and habits, even unusual. For example, the best customers for banks are those who buy felt pads for furniture, because they are more scrupulous and willing to meet their debts in the right time!

Personal data may be used for different purposes. There are those who consider data acquisition as pure global surveillance, but the use of data by companies can improve the experience of each of us because, by knowing us, they take us to what is in our sphere of interest.

We accept this compromise every time we register with a web platform, when we use an application and every time we send a message. The Big Data market is unstoppable and fighting against this giant would not make sense. Most of the time we receive a service in return, but it is rarely worth our privacy. This is the problem, do not give us the right reward in return. When we open a bank account, the bank gives us a service that we pay with commissions, but they also acquire our data; in the same way, we pay for applications that also require our data. This exchange is not fair. How can we evolve the situation in our favor? For the first time, we users can be paid for our data.

DTCOIN

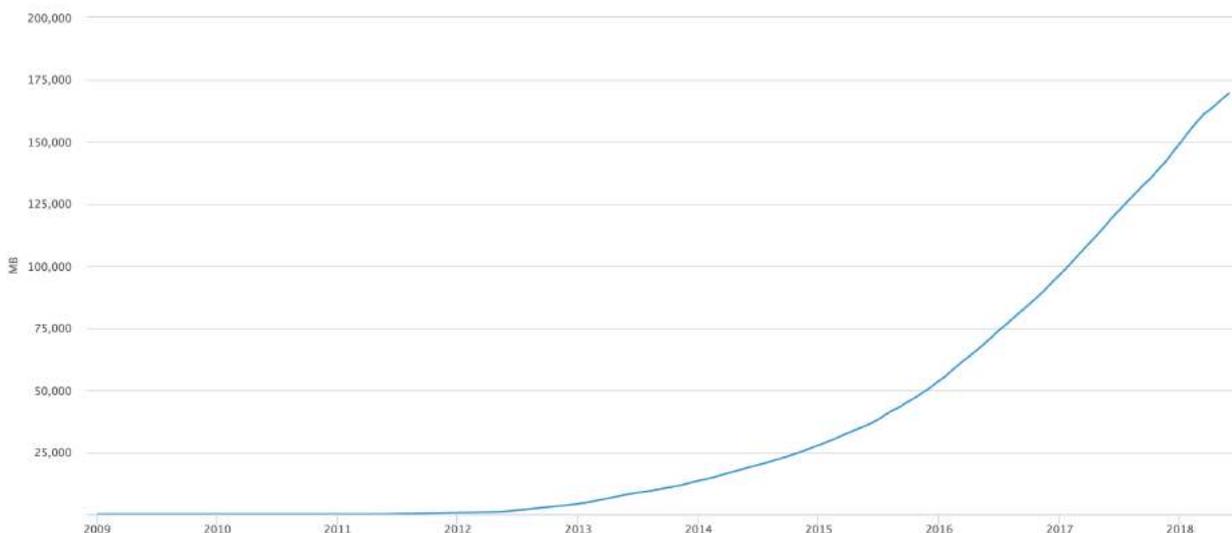

The Blockchain

The biggest and most innovative information management system is the blockchain. The blockchain is a register, where are transmitted data and information resources. We can compare it to an infinite accounting book, in which all the movements made from 2009 to today are recorded. The blockchain can be used in all areas where a relationship is needed between people, groups or companies, from the financial to the medical sector, up to the personal one.

The first resource, applied to the blockchain was the cryptocurrency. Cryptocurrencies are virtual money, created and working on blockchain. The great advantage of the blockchain system is the security of the transactions, through the approval of users, with the respect of the consent of 50% + 1. This is an open and controlled verification system, a peer-to-peer system, which does not require banks or other control entity to make the transaction.

The blockchain protocol is secure and impregnable. Once a transaction is approved, it is completed with the consequent creation of a new block, in which the information is enclosed. Blockchain in fact means chain of blocks. A block can be compared to a strongbox, in which information is inserted: to close this strongbox it is necessary to solve a complicated mathematical calculation that thousands of users try to decipher it. The majority, solves the calculation correctly and that combination is accepted to seal the strongbox, which will never be reopened. whether, it is a cryptocurrency, or an image, it is always a code. The code enclosed in the block can not be changed in any way. The consensus, as a verification system and the immutability of the approved information, makes the blockchain system defended by all sorts of hacking attempts.

The blockchain is the most revolutionary technology in history, the data transmission system of the present and the future, which will completely transform every area of our lives.

The total size of all the headers and transactions on blockchain. [1]

DTCircle Ecosystem: introduction

The DTCircle is an ecosystem created to get the most, out of the value of your data. DT stands for data and is a system built on blockchain, which lives thanks to the value of each member's data. Aware of the value of the data, DTCircle ensures a fair exchange.

Like any other platform, DTCircle requires data to access it: the user receives not only the experience within the DTCircle world, but a real profit.

The DTCircle is a world, able to offer its users tools to interact, communicate, learn and make purchases. Each share will be reciprocated with a gain in DTCOIN.

The DTCOIN is a cryptocurrency, whose value is based on Big data, collected in the DTCircle ecosystem. The information will be used towards selected external companies generating a profit. Much of this profit is sent to the users, allowing to monetize this experience. Below, the DTCircle ecosystem and its experience.

DTCOIN

The DTCOIN is a cryptocurrency, whose value is based on the request and offer and the traffic of data generated and collected. Data collection supports the currency, generating a profit. The market has a very high demand for data: based on the growth in the last years and the numbers during the first half of 2018, it is expected a closure of 42 billion dollars of capital generated this year. In the future it will only increase.

2017 Volume of the world market
of mobile apps
\$ 166 000 000 000

2017 Numbers of users
of mobile messengers
3 548 000 000

2017 Big data market
\$ 35 000 000 000

2017 Total volume
of cryptocurrency market
\$ 180 000 000 000

The fact that the currency is supported by the Big Data market, is a unique and extremely positive feature, because it makes the price. Cryptocurrencies, such as legal currencies, have a constantly fluctuating value. This is normal and accepted by users of cryptocurrencies, but the danger is the vertiginous collapse of the price. Depending on the dynamics of the market and the quantity that is bought and sold, the price can vary significantly. This is because the value of a cryptocurrency is based, in most cases, solely on the request, on sales and purchases. When the value is based solely on the transactions of the users, it is not possible to predict the trend, considering also the danger of the sales of large quantities of coins, which strongly affects the loss of value. The DTCOIN instead has a concrete underlying, an underlying billionaire market.

The great part of the cryptocurrencies are born with a finite number, since the beginning they are decided how many coins will be released in the market. A feature that makes inflation impossible

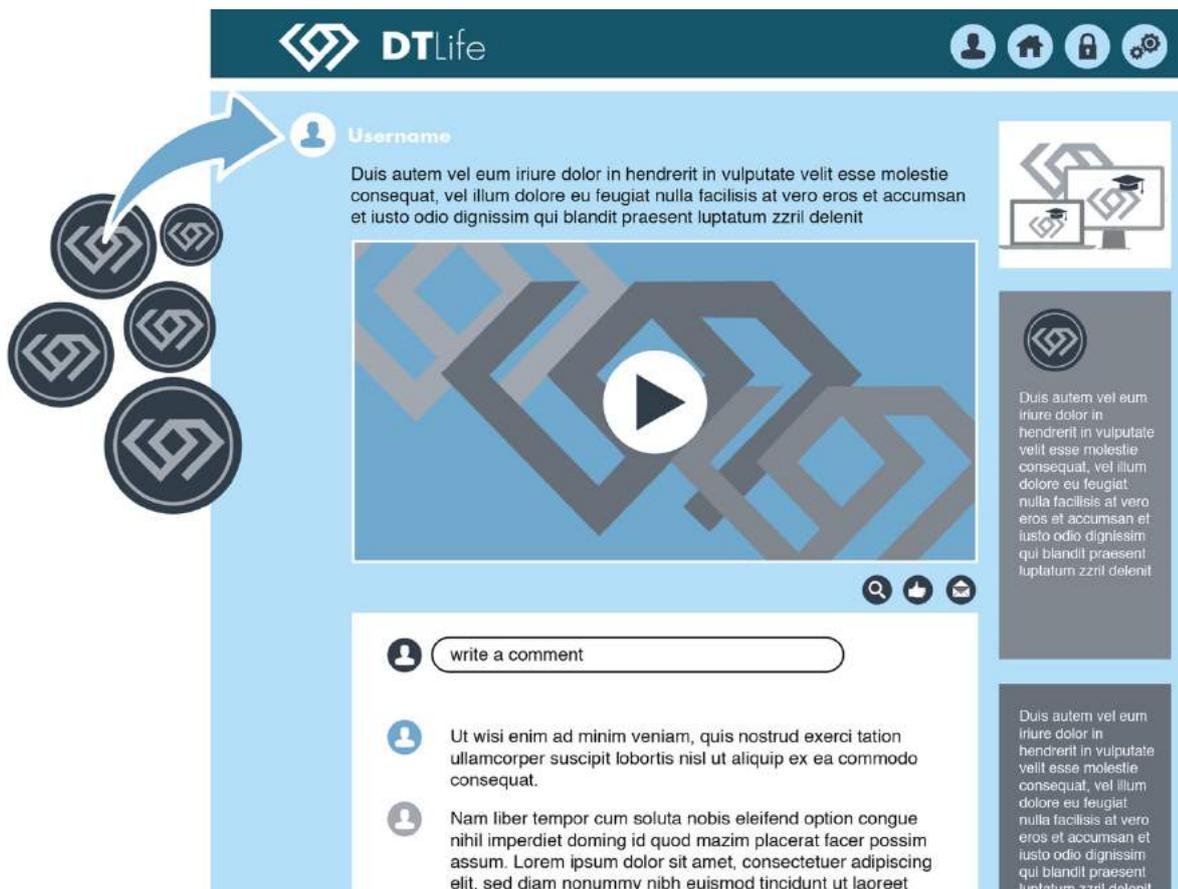

and implies that more coins are available on the market, the less they are rare, the less they are worth

The DTCOIN is a currency that can be spent on online and offline shops that accept DTCOIN. Activities outside the DTCircle can accept DTCOIN as a payment. It can be exchanged with other cryptocurrencies or traditional currencies. The DTCOIN is the tool to receive your earnings in the DTCircle ecosystem.

DTLife

Every day we share our moments in the most famous social networks: imagine if I had received any money for each post. Life has made this dynamic possible. This is because every sharing and every interaction corresponds to a useful data. Every comment, sharing and navigation has a value.

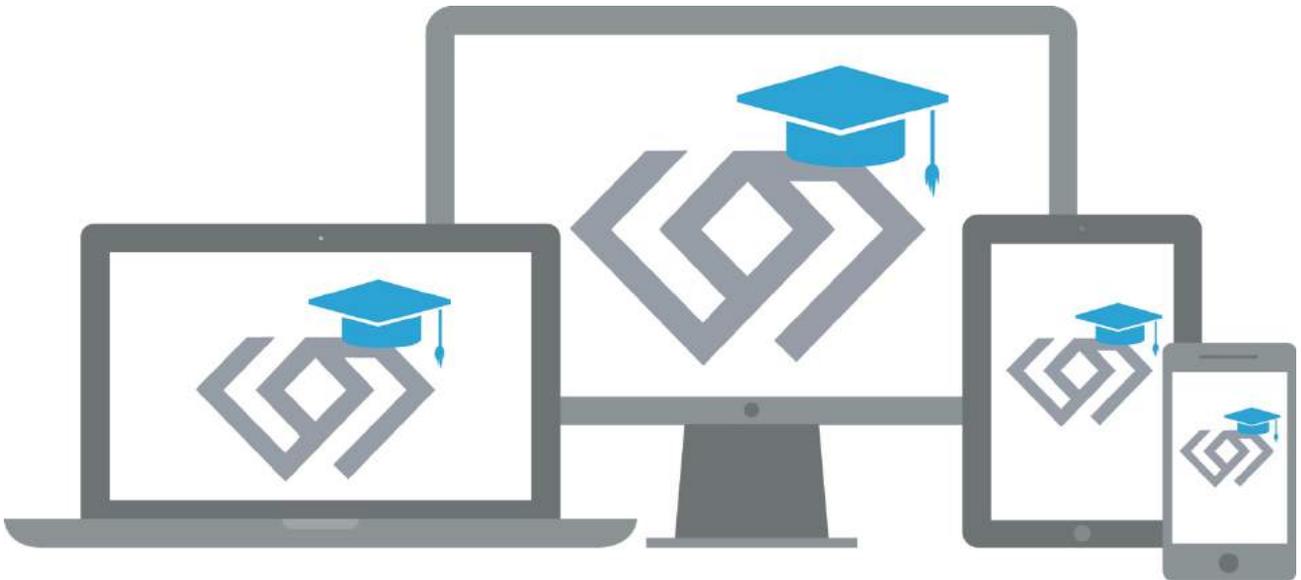

Life is the social network platform in which DTCircle users can share and monetize their own experience. A value in DTCOIN is established for each publication and for its interactions: the value of a content is determined by the interactions generated. The goal is to generate the highest number of interactions, enjoying social experience and gaining. DTCircle will aim to share the posts posted on Life also on other social networks and blogs, so as to disseminate Life and allow the user to advertise their content to the maximum.

DTAcademy

Learn, grow personally and professionally. A fundamental part of our life is formation. The DTCOIN can be spent at the academy DTAcademy, which will offer training courses related to different sectors and topics, from information technology, to cooking, to communication. The course proposal will grow in parallel with the number of users and shared information.

DTFoundation

The creators of DTCircle know that, to receive, we must give first
DTFoundation is the means to finance beneficial projects, publicizing them within Life and collecting donations in DTCOIN.

DTPay

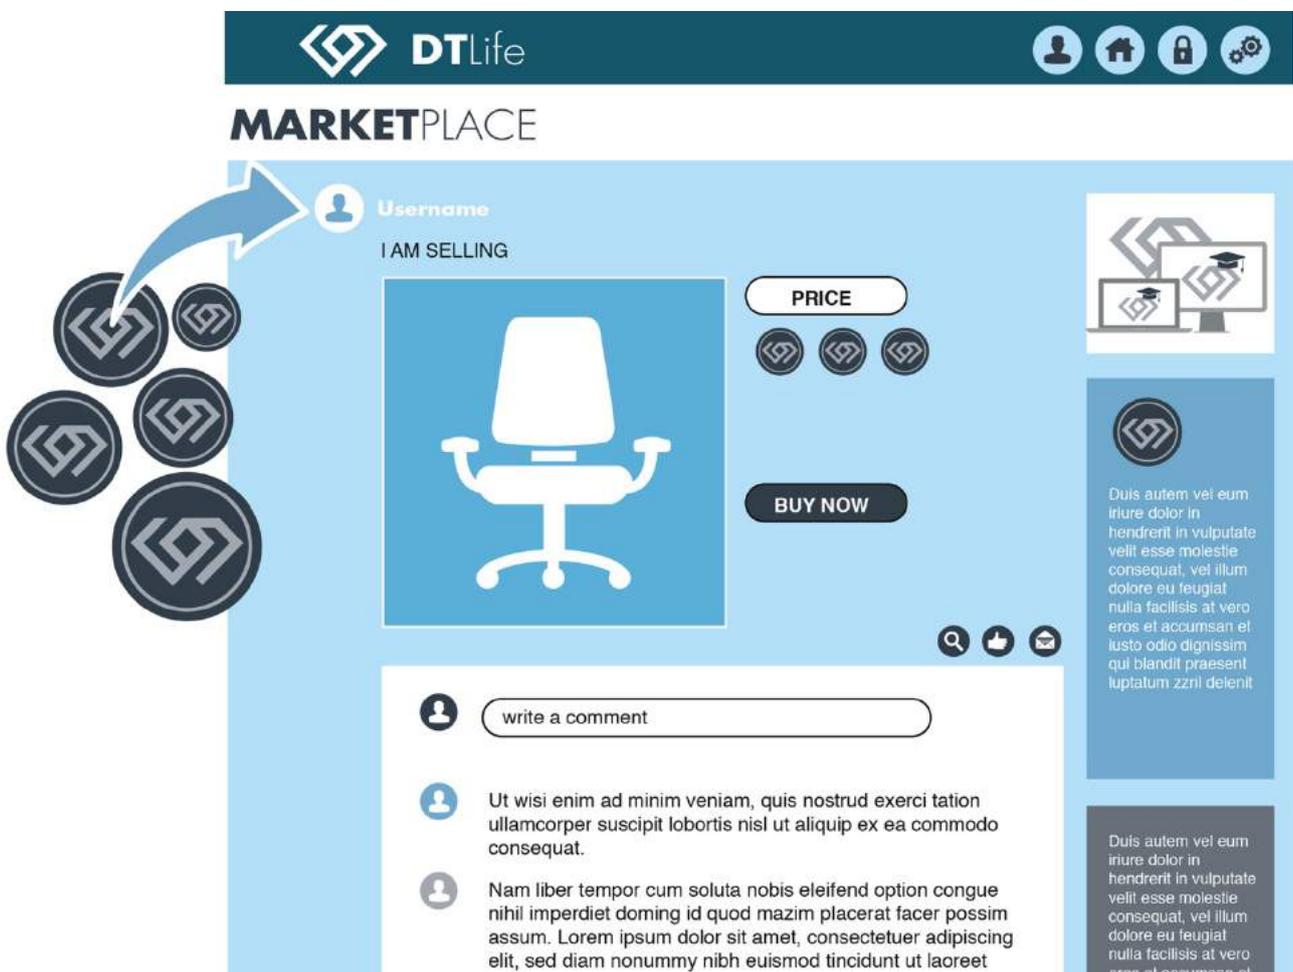

DTPay is the function to promote and sell products and services, receiving payments in DTCOIN. The DTPay is the meeting point for buyers and sellers, a useful tool for traders.

Immediate payments between nations all over the world.

Service available from 10 June 2018, in one month has developed a volume of exchange between users of 450 thousand euros, between 150 activities.

DTPay is the app to manage the digital currency in a simple and easy way, directly from the smartphone. Thanks to DTPay you can quickly locate the shops where you can pay with DTCOIN. Thanks to this application all the dealers that accept DTCOIN will be geolocalized, from which you can spend the DTCOIN to buy what you want.

An app designed “friendly user” to allow any member, of any age and digital competence, to be able to use it regularly

DTCOIN 1.0

DTCOIN 1.0 is a cryptocurrency. In the initial phase, lasting about thirty-six months, it is managed centrally. This means that the management of the blockchain on which the currency is built will be private. Coin mining is entirely managed by the company DTCOIN UK, in charge of the development of the project. Mining works on proof-of-work technology (POW): through the resolution of mathematical calculations by servers with high computing power, new coins are released available on the market.

On 30 June 2020, DTCOIN 1.0 will swap on a decentralized and distributed technology. This means that the user will be invited to deposit his coins in a new wallet, automatically receiving the DTCOIN 2.0, the evolution of the coin. This implementation with a technologically superior will allow the DTCircle ecosystem to be activated. In fact, DTCOIN 1.0 will not be used directly in the DTCircle, but is intended to gather consent and funds for the creation of it.

The DTCOIN (both version 1.0 and version 2.0) has 8 million pre-mined coins, ie already available for purchase, for a total offer of 42 million coins.

The DTCOIN power: strengths

A cryptocurrency must be reliable, as it is technologically safe and stable in price. In the digital money market, rises and big falls are more than common. But, for the creators of the DTCircle and DTCOIN, constant fear and risk are not acceptable. DTCOIN differs from other cryptocurrencies, based solely on the demand and supply model, thanks to its maintenance on the data and big data market, a real and billionaire market. The price of the DTCOIN will be guided by the standard date, a real countervalue.

DTCOIN's goal is to create a community of at least 100 million users worldwide. The success of currency is determined by the community. DTCircle is the medium that will incite the use of DTCOIN. Waiting is not enough, you have to act to create the DTCOIN community.

Members choose DTCOIN not only as a cryptocurrency, but for its advantages over traditional FIAT currencies and other cryptocurrencies. DTCOIN boasts an unsurpassed transaction speed: the average average transaction time of a Bitcoin is one hour, four minutes with Litecoin, DTCOIN takes less than a second. There are no physical sending limits, the DTCOIN can be sent all over the world in zero time without increased commissions.

The DTCOIN is extremely secure and protects your privacy. All wallets and related transactions are encrypted with an alpha-numeric 90-character hash algorithm, built in XOR technology. This makes the transaction totally anonymous and any attempt to hack becomes impossible.

By June 2018 an affiliation program will be launched for commercial activities, which will allow the direct spending of DTCOIN in commercial businesses to purchase goods or services. There will be cost advantages for those using DTCOIN as a currency for their purchases.

DTCOIN is one of the few cryptocurrencies convertible directly in euros, an availability that creates interest and confidence.

Today DTCOIN generates hundreds of daily exchanges for products and services and is convertible directly into euros on the exchange www.forcedmarketcap.com.

DTCOIN secret: the standard data

Since its birth DTCOIN wanted to be different, a coin born with the aim of protecting and growing. In the past, money was tied to the gold standard, a monetary system in which the monetary base is given by a fixed quantity of gold. Until then, the money had a real countervalue: the DTCOIN has recreated this concept.

The founder of DTCOIN, Daniele Marinelli, took two years to analyze the market, looking for a solution, contributing to the creation of Forced Market Cap (FMC) system.

FMC is a new way of creating capitalization to a cryptocurrency, through a special mathematical algorithm combined with four major sectors, allowing a growing capitalization of DTCOIN.

The first coin that grows thanks to a support of four different sectors, for a value of 3 trillion dollars.

Datas e Big data

A DTCOIN can be compared to a container, which grows every second on the basis of the data accumulated inside it. Every second, users will share data with DTCOIN, allowing the value to grow in the face of the FMC market. Purchase and sale of DTCOIN is a continuous act, because it allows users to enter the DTCircle: each access and action corresponds to a new data. These data will have the function of being analyzed and used thanks to Big Data technologies, in favor of the purchaser.

Advertisement

The exchange currency of the DTCircle community will be DTCOIN, which can be used to purchase sponsorship on the DTCOIN channels. This will be a powerful means of sponsorship, to reach your customer target within the Life platform.

ICO partnership

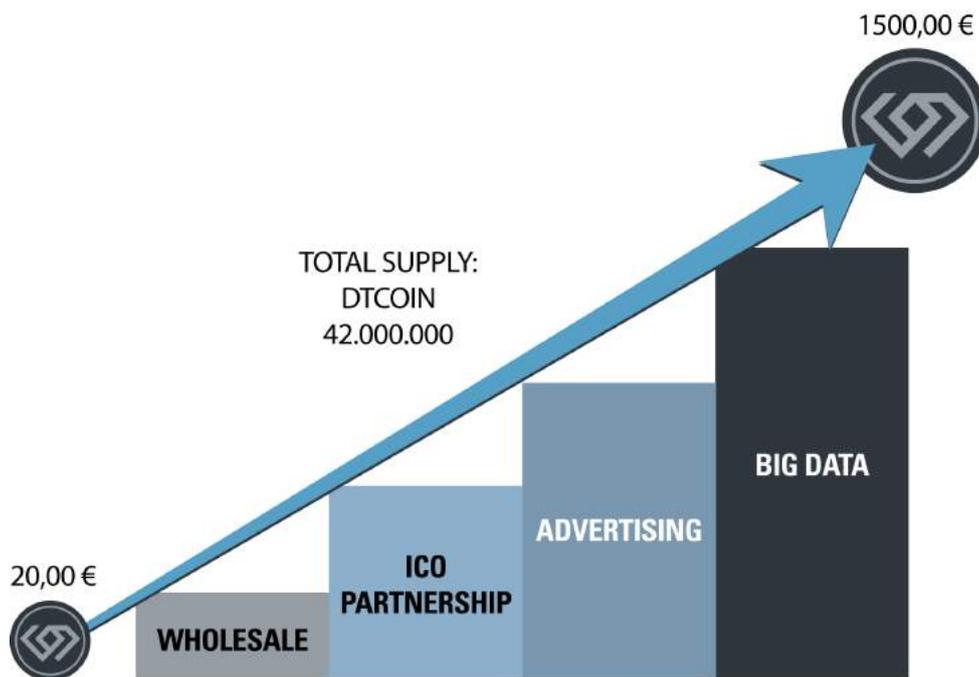

DTCOIN buys large quantities of tokens in PRE-ICO for over sixteen months, and then sell them once again on the market. This allows you to buy tokens from ten to twenty times less than the ICO's listing price, deciding to sell them on the market or keeping them for the future. Today

DTCOIN has over 450,000 active users in over 170 countries around the world, a number that is constantly growing and has decided to open in 2019 the possibility for its users to enter PRE-ICO of new projects selected by DTCOIN, allowing its users in the future to buy directly into DTCOIN token in presale at very advantageous prices.

Telephonic Wholesale

Telecommunications is the second market, for profit margins after the energy sector. Wholesale telephone is the international telephone traffic business between companies from different countries, where a company buys wholesale and sells retail.

DTCOIN & Forced Market Cap: a new concept of trading

Forced Market Cap (FMC) is a new exchange market and a capitalization solution created in 2017, for asset-based cryptocurrencies. DTCOIN was one of the first cryptocurrency to list on this exchange with a new logic market. Normally the market is based only on the system of supply and demand, allowing speculators to manipulate the price without scruples and, in most cases, eroding small portfolios. In FMC, the market follows a logic based on a cyclical mathematical algorithm, combined with market injections thanks to Big Data, advertising, ICON partnerships and telephone wholesale sectors.

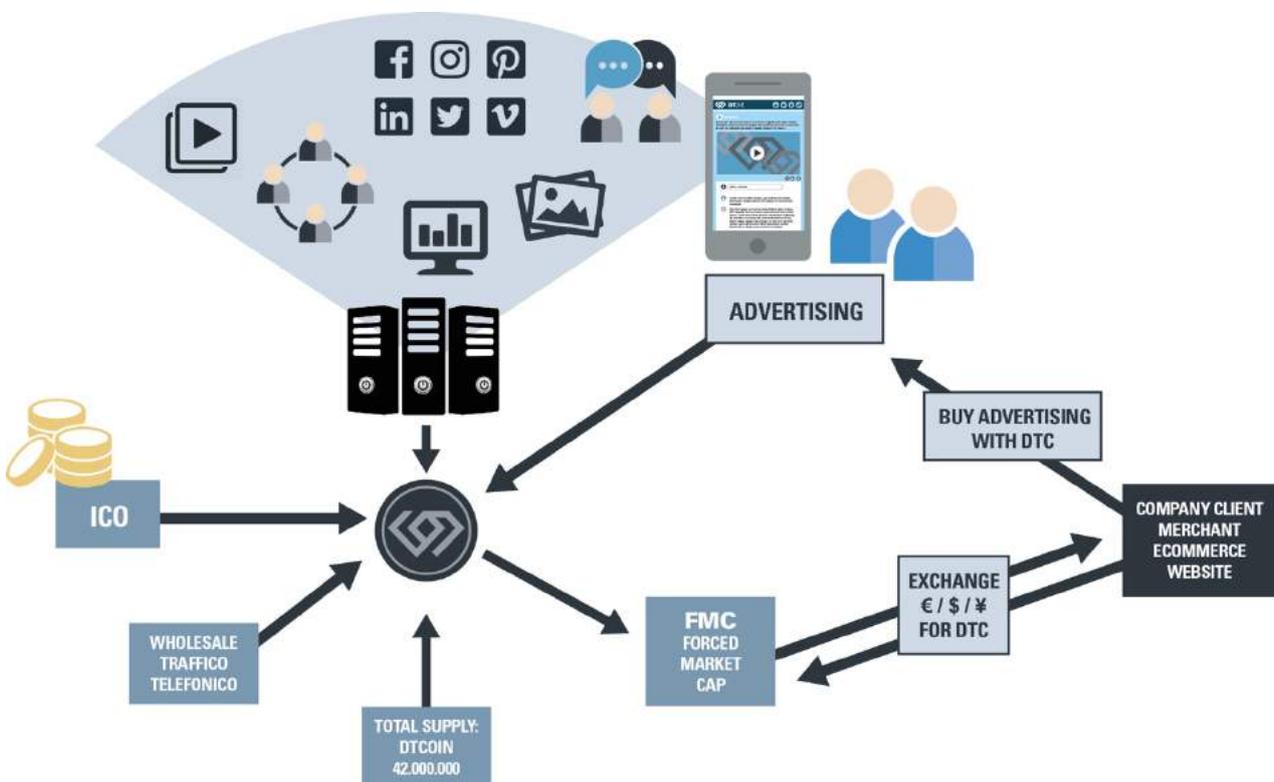

The market trend follows a cyclical logic:

1) at the beginning of a cycle, the algorithm manages purchases and sales on the market, inserting priority logics, lots, number of sales made, increase in value of injections, number of users and timing;

2) once the limit price has been calculated, the system allows the placing of orders. The system closes a cycle and reopens immediately at an initial price, slightly higher than the opening price of the previous cycle linked to the factors indicated.

At each cycle, the total number of sales with respective value, is compared to the number of purchases, the number of sales made in the week, the amount of liquidity fed by the standard date, the order of registration.

Tomorrow, the most important wealth will be the data and Big data and that is the one on which DTCOIN aims more, publishing the Life project at the end of 2019. Each activity distributes up to 80% of the revenues between users and the DTCOIN. Imagine if today 80% of the value of world data were in people's hands.

Wallet DTCOIN 1.0

In December 2018 online wallets will be released to allow the management of wallets on computers and through certified applications for Android and Windows systems. The DTCOIN wallets keep the coins safe, holding the DTCOINs in private. The downloadable and mobile wallet types will be created for Linux, Mac OS and Windows systems. IOS and Android Mobile, web wallet.

DTCASH (DCH)

DTCASH is a decentralized cryptocurrency, which will be presented to DTCOIN users in the month before the official launch, dated for the end of December 2018. DTCASH's mining technology will be totally proof-of-stake (POS) or proof-of-job (POJ).

The peculiarity of DTCASH is anonymity. The system will work on a protocol that will allow total anonymity in transactions, with a level of two-level explore nodes. The network of verifiers will serve to keep the DTCASH network safe. The time of an average transaction with DTCASH is less than one minute. The average transaction cost will be 0.00001 DCH.

DTCOIN 2.0

On June 30th, 2020 the DTCOIN 1.0 currency will make a technological upgrade by making a total swap in a new coin of the latest generation, the DTCOIN 2.0.

DTCOIN has found the right balance between centralized and decentralized, combining these two concepts together to solve the typical problems of the cryptic world, with the introduction of:

- wallets verified with KYC to increase the transparency and trust of the member;
- decentralized and distributed ecosystem;
- decentralized data management;
- decentralized blockchain;
- central issue of coins and then distributed;
- nobody can transfer, confiscate or seize the coin;

- privacy with transparency (and without anonymity) in the way transactions are carried out;
- full compliance with the law (compliance with the main jurisdictions and development of industrial standards);
- fast transactions under 60 seconds;
- limited number of coins;
- smart contract.

It will be created a decentralized consensus system through the introduction of Masternodes, Voting nodes, Ledger nodes, privacy.

Wallet DTCOIN 2.0

In December 2019 online wallets will be released to allow the management of wallets on computers and through certified applications for Android and Windows systems. The DTCOIN wallets keep the coins safe, holding the DTCOINs in private. The downloadable and mobile wallet types will be created for Linux, Mac OS and Windows systems. IOS and Android Mobile, web wallet will allow the production of new DTCOINs through the POS.

Wallet DTCASH

The DTCASH encrypted wallets use proof-of-stake to support and protect the decentralized blockchain network. The downloadable and mobile wallet types will be created for Linux, Mac OS and Windows systems. IOS and Android Mobile, web wallet.

Paper wallet DTCOIN and DTCASH

The DTCOIN and DTCASH wallets work on the basis of an advanced security protocol, but many prefer storage on physical portfolios. The DTCASH and DTCOIN paper wallet is a physical document that contains all the data necessary to receive or store a quantity of DTCOIN or DTCASH. You can store it in a private safe or where it is considered safer. The private key is generated by the member on the highly secure DTCOIN and / or DTCASH server.

Members are advised to disconnect from internet, in the process of generating a private key.

Life: your data, your privacy, your profit

Controlling your smartphone is the first thing that 74% of the population of the industrialized world just wakes up. Today the phone has become an extension of our body and we can not imagine doing without it, both in private life and in work. The goal is to allow people to monetize their experience by downloading the Life application.

DTCOIN creates a new concept of sharing economy, where the member, for the first time, can become an active player in the data market. Imagine that every day, every interaction, sharing and action, generates an income. With the Life social network, all your personal browsing and search results are protected and for the first time they will pay you for them. All this is possible thanks to Life, where the user will have mainly three sections inside.

Life is the heart of the community, a social network where people can monetize thanks to the contents they share, whose value is based on the amount of interactions generated.

Life has the objective of dividing the profit of all the proceeds from the sale of data, from the sale of advertising space and from market surveys, with its users to 35%. For the first time, everyone can earn money from their online social business. You earn in DTCOIN and DTCASH. The user will receive this fee to be exchanged on the exchanges or to spend within the DTPay stores. Every month, you will receive a small fee, regardless of your activity: the more you are social and you create interaction, the more coins are accumulated.

DTChat

DTChat is a multi-functional system that includes the features of a classic messenger and a multi-currency crypto-wallet. Inside you will be able to keep individual and group text chats, audio and video calls.

DTPay on DTLife

One of the fundamentals of DTCOIN is the spendability, because without possibility of use it there is no future for a currency. An application will be created where members will find products offered by the DTCOIN community. The revolutionary feature is that every member, will be paid to be part of the DTCOIN world, where DTPay distributes on each sale a portion of the proceeds to the market, through the standard date and the fair assignment of DTCOIN to the entire community.

This generates an economy that feeds itself, where the consumer gains from the purchases of the community, obtaining DTCOIN that will be assigned to him every month and that he can spend within the circuit to buy the prizes in the shop. Using this redistribution algorithm, businesses and consumers create a more efficient business model. Every month the consumer receives new DTCOINs to spend and the company is ready to accept them and then redistribute a percentage of its turnover. A system where the more you spend and the more you generate new DTCOINs to spend.

Wallet Life

The Life wallet is a multifunctional system that includes the features of a classic multi-valued crypto-wallet. Inside the user will find paid channels, cryptocurrency transfers between users, cryptocurrency micropayments in offline solutions, conversion of DTCOIN and DTCASH in legal tender currency.

In addition to this, the international shipping service will be integrated to allow users to transfer money to any part of the world at a very low price. Furthermore, the D-POS and POD (Proof of Data) system will be integrated and the user will be able to monitor his social network earnings or his data shares directly from his account.

Future Developments

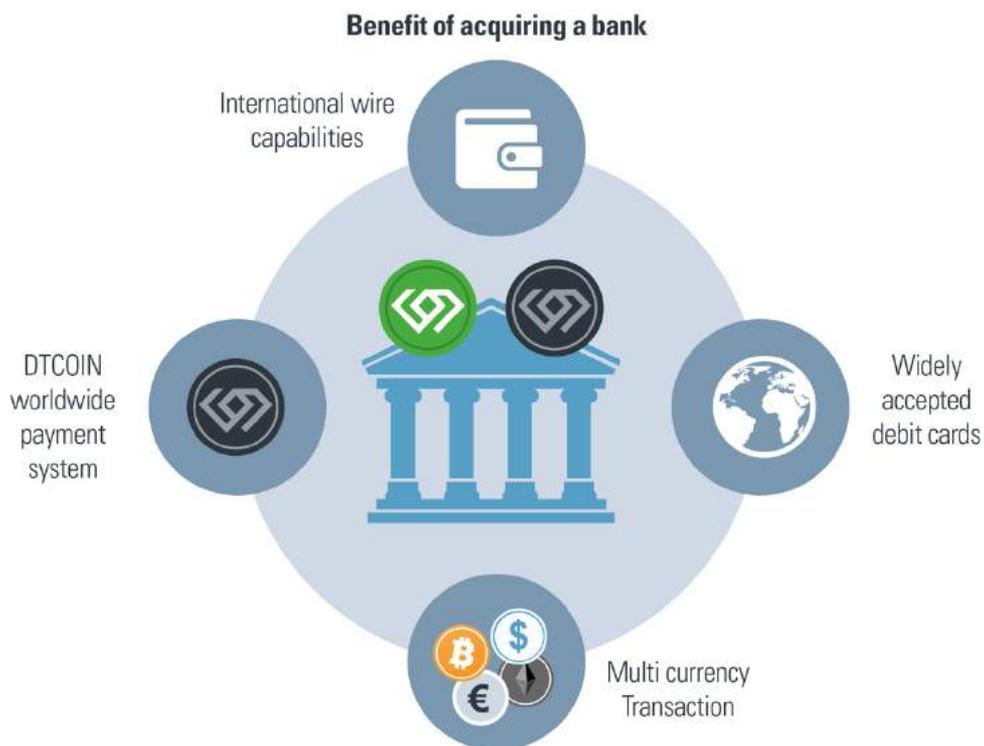

DT Card

As a first connection with the traditional market, DTCOIN aims to create a VISA or Mastercard card, with which the member can easily spend their coins. This will allow to a direct access for traders and increasing the usability of the currency.

DT Bank

Although the focus of the DTCOIN and DTCASH project is defined by the blockchain, there is also the acquisition of a banking institution in the development plans of DTCOIN and DTCASH. The bank will aim to serve clients, engaged in the cryptic world by granting services of portfolios, current accounts, debit and credit cards and encrypted payment services. A decentralized and electronic KYC / AML system will be used. Each customer within his account will have directly DTCOIN and DTCASH and can perform any normal activity permitted by the classic banking circuit.

Roadmap

February 2017

Launch DTCOIN

March-April-May 2107

Conferences in Africa, Asia and India to present the DTCOIN project

September 2017

DTCOIN in 104 countries with over 200,000 members

October 2017

IPO Listing DTSocialize LTD

Founders e partnership

Daniele Marinelli

Daniele Marinelli, 46 years of Roman origins, twenty-three years of freelance as an accountant and business consultant at the Prati district of Rome. In 2010 he took on the role of corporate advisor and was among the first in Italy to buy Bitcoin, feeling the potential of the blockchain technology. In 2016 he devoted himself to the analysis of cryptocurrencies built on economic systems, moving along the path that led to the creation of DTCOIN.

Blocktech LTD

Blocktech is a company based in Dubai (UAE), specialized in the development of informatic systems, in blockchain and in the construction of cryptocurrencies. The founders participated in the creation of eight blockchain cryptocurrencies for international platforms.

DT Merchant LTD

DT Merchant LTD is a London company that deals with the relationship with companies and the large distribution for the creation of the DTPay marketplace.

DT Cloud Data LTD

DT Cloud Data LTD is the company that deals with the storage of data collected through the DTCircle system with DTCOIN, based in Dubai (EAD).

DT Data Licence LTD

DT Data License LTD is the company in charge of training and marketing the mining software license and the use of DTCOIN. This company, led by a team of experts in the field of blockchain training, has the task of divulging the use of cryptomonete and the DTCOIN product, with its vision and philosophy.

Upmarkets LTD

Upmarkets is the Estonian company authorized with issued licenses by the Estonian authorities to release and manage wallets as well as to trade in the DT Coin, DT Cash and DT Circle.

By accessing the website www.UPMARKETS.EU the licenses and their validity can be verified through a direct link to the website of the agency government that authorized the coins.

The opportunity - conclusion

To become an active player in the data market: this is the goal. DTCircle transforms the rules of the system, where we are not just a source of information, but those who use the information for their advantage, with awareness. Every day our data are sold without our approval, we do not know how they are used. Choosing to share them for their rightful value is the first step towards freedom, choice and use

A new tool to monetize our data and our publications, without limiting ourselves to the classic monetary and banking system. The blockchain allows us to communicate, share and gain with a security before it can not be found. The earned DTCOIN will be a means of payment, but not only: a real investment. The DTCircle ecosystem sharing plan will lead to an increasingly higher user acquisition and, the more data will be acquired through the DTCircle, the more the DTCOIN will increase in value.

The plan is written; the DTCOIN has been created. Starting to buy DTCOIN now, means reserving the opportunity to own a product that, thanks to its services, will grow exponentially. Now the first step is to create the ecosystem to allow data acquisition and creation of the DTCircle community.

The whole world earns with your data; with DTLife you can start earning too. Investing in DTCircle means choosing the investment sector of digital innovation, the safest in the world, supported by a product whose demand is never in short supply: data.

Today you can seize the opportunity to become one of the few people who will earn from the creation and development of DTCircle.
50 million tokens, but only 8 million **Social Tokens** available on the market.
